

# Zoom Transcript Downloader

Quick Start for version 2026.09

## The short version

Install the extension, open Zoom's **Transcripts** page, click **Save all**, and leave the tab open until the run finishes.

## 1. Install

**Recommended:** install from the direct Chrome Web Store link:

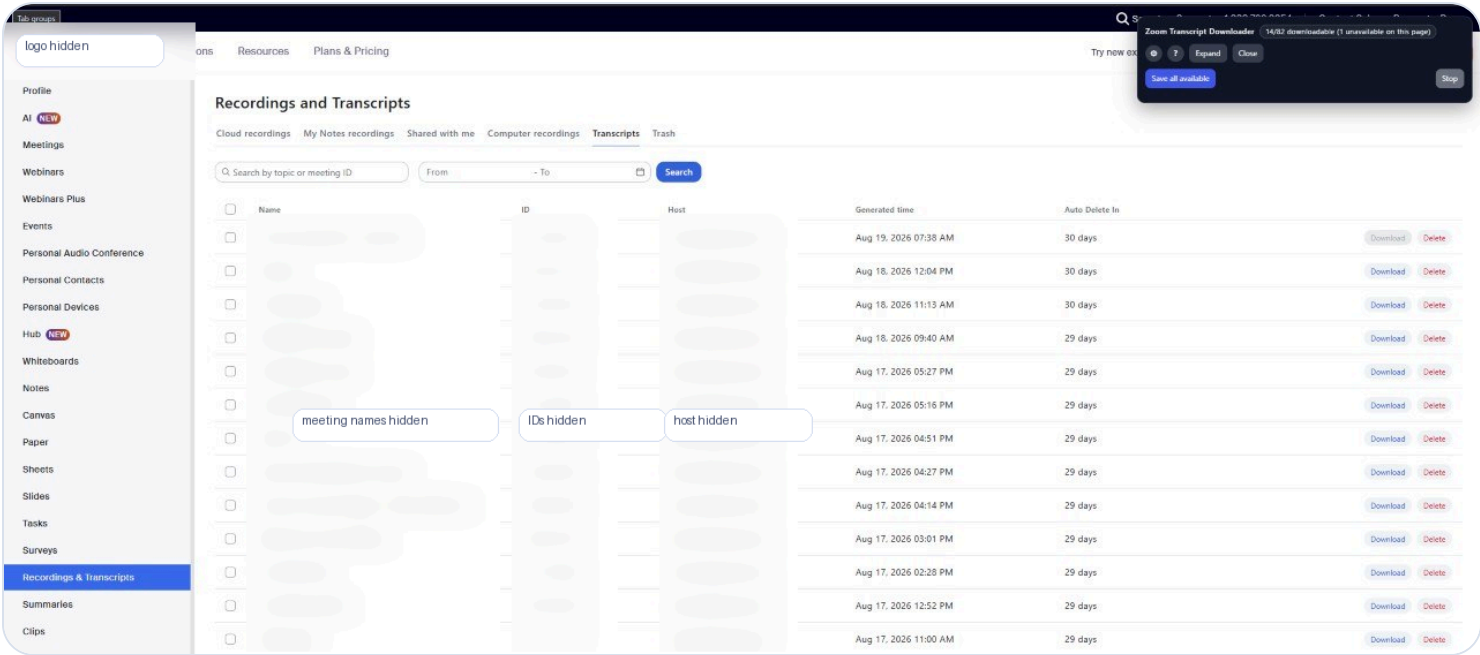

<chrome.google.com/webstore/detail/lbmejnmnbjnoahehjfmmhaiheopkgcdg>

If you use Microsoft Edge, allow extensions from other stores if Edge prompts you.

If you need manual installation instead, open `chrome://extensions` or `edge://extensions`, turn on **Developer mode**, select **Load unpacked**, and choose the extracted folder that contains `manifest.json`.

## 2. Open Zoom

1. Sign in to your Zoom web portal.
2. Open the page that lists recording transcripts.
3. Select the **Transcripts** tab or view.
4. Confirm transcript rows are visible.

Example Zoom Transcripts page with the extension panel open.

### 3. Download

1. Wait for the Zoom Transcript Downloader panel to appear automatically.
2. If you previously closed it, reopen it from the browser Extensions menu.
3. Click **Save all**.
4. Use **Save page** instead if you only want the transcripts visible on the current page.
5. Keep the Zoom tab open while the extension works.

**Recommended:** use a dedicated Downloads subfolder such as `Zoom Transcripts` to keep transcript files organized. This is optional.

### 4. Wait

- The extension works through the available transcript pages automatically.
- It saves the transcripts Zoom currently allows.
- It skips transcript rows that Zoom marks as unavailable.
- If you need to stop, click **Stop**. The extension stops after the current item finishes.

### 5. Find Your Files

Look in your browser's normal **Downloads** location and the subfolder you configured in **Settings**.

Example destination:

`Downloads/Zoom Transcripts/ZoomTranscripts-08192026`

### Problems?

- If the panel does not appear, wait for Zoom to finish rendering, then reopen the extension from the browser Extensions menu if you previously closed it.
- If the browser prompts for every file, turn off the browser setting that asks where to save each file before downloading.
- If the Zoom page changes while the run is in progress, refresh the page and start the batch again.
